

ANY CITY CAN BE A SMART CITY WITH SPECTRUM

Spectrum enables your smart city deployments with a comprehensive set of smart technologies and network solutions. Digitize your city by leveraging our expertise and operational capabilities to ensure your critical infrastructure investment drives results.

OUR CAPABILITIES

Smart cities depend on a modern and scalable network. Spectrum can leverage our existing network infrastructure in your city to support solutions that lay the foundation for the future. All cities start with what's important to their city and citizens. Whether it's smart parking, smart traffic or smart infrastructure solutions, it's just the beginning. We're all in on your transformation.

Our network supports a variety of infrastructure requirements, so you can focus on the aspects of your smart city journey that impact citizens. Cities that effectively leverage the Spectrum network and utilize data analytics can experience the benefits of improved city services to the full extent.

The **flood of data** generated by smart city initiatives emphasizes the need for **reliable, high-performance network connectivity**.

We understand smart city initiatives have different connectivity requirements. Applications like autonomous mobility are highly sensitive to latency, while weather sensors place less demand on network performance. Some applications may require the benefits of mobility offered by wireless networks, while others may need a highly reliable, high capacity wired network. Spectrum is a partner who meets all your needs now and in the future, by offering a range of network options throughout your city for any smart city initiative.

OUR OFFER

Effective smart city deployments allow cities to accomplish multiple, simultaneous objectives. Whether focusing on improved citizen engagement, physical infrastructure like water and lighting, transportation and parking, or public safety initiatives, Spectrum has you and your city covered. Spectrum can partner with you to bring comprehensive smart city solutions to life, supporting every step of your smart city journey.

GET READY FOR SMART CITY DEPLOYMENTS.

Designed to address the challenges of state and local government agencies, Spectrum offers high-performance enterprise connectivity and services that will help you modernize your infrastructure and be ready to consider smart city initiatives.

Internet service is mission critical for cities, employees and infrastructure. Use high performance fiber-based service up to 100 Gbps*, or widely available broadband service up to 1Gbps and wireless cellular access.

Interconnect city departments, partners and cloud infrastructure with a reliable multi-gig capable SD-WAN or high performance Ethernet wide area network.

Simplify your network management, improve network security and scalability with 24/7 monitoring and support.

Enable wireless devices, residents and visitors to seamlessly and safely connect to the internet across your city with a managed Wi-Fi solution.

BE OUR PARTNER

If you have questions, we have answers. We have the expertise to help you make strategic, sustainable long-term investments in your community, enabling cities to be prepared for what the future may hold.
